Data exchange is like any exchange of goods...

Reporting / Dissemination / Sharing

International data cooperation: the vision

International data cooperation – main issues

- Reduce the burden of national data supplier to the minimum
- Harmonise methodology between international organisations
- Put in place international data sharing arrangements: national data is produced only once and shared with all International Organisation
- Identical data values are disseminated by all International Organisations

International data sharing has been emphasised by the Eurostat Tourism Statistics Working Group in 10/2017.

Some questions

Are there further efforts needed to improve international data sharing in tourism statistics between international organisations?

Are there statistical or technical issues which should be tackled to eventually come to more international data sharing?

Any other issues which should be discussed on data sharing between international organisations?

Finally
